DETAILED ACTION

This action, dated December 2, 2004, is in response to Applicant's response, filed September 28, 2004. Claims 1-13 are pending.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Louis Woo on December 10, 2004.

The application has been amended as follows:

IN THE CLAIMS:

Claims 2-11 and 13 have been canceled as directed to non-elected species.

Citation of Relevant Prior Art

2. Chang (US 5,974,088) discloses a digital signal reproducing apparatus that includes a code offset detector for detecting a difference in number between bits of "0" and bits of "1" in the bit stream and generating a signal to suppress the difference (Fig. 4, elements 42 and 44). Konishi et al (US 2001/055251) disclose a digital signal reproducing apparatus that includes a detector for detecting DC level fluctuation in a playback signal, an analog to digital converter, and a controller that suspends control of a DC controller based on offset information (Fig. 1). Konishi (US

6,104,682) discloses an analog to digital converter that converts a signal from a DC level controller (Fig. 1).

Allowable Subject Matter

3. Claims 1 and 12 are allowable over the prior art of record because none of the references of record alone or in combination suggest or fairly teach a digital signal reproducing apparatus comprising a combination of all limitations as recited in each of claims 1 and 12.
